Profile Summary

Software Development Engineer with experience in building production-grade web applications solving Real World problems. Strong foundation in Data Structure & Algorithms and OOP. Proficient in Java, Spring Boot, REST APIs, and modern frontend frameworks. Focused on building Scalable, production-ready systems for high-scale technology platforms.

Education

Koneru Lakshmaiah University – <i>BTech, CSE</i>	CGPA: 9.24 2023 – 2027
Narayana Junior College – <i>BIEAP, MPC</i>	CGPA: 9.00 2021 – 2023
Sri Chaitanya Techno School – <i>SSC</i>	Percentage: 100% 2021

Technical Skills

Programming Languages: Java, SQL, C
Frontend: React.js, Next.js, TailwindCSS
Backend: Node.js, Spring Boot, RESTful APIs, WebSockets, JWT
Databases: PostgreSQL, MongoDB, Supabase
DevOps & Tools: Git, Github, CI/CD, Docker

Projects

CollabX | *Live* May 2026

- Built a real-time collaborative IDE supporting up to 20 concurrent users per session across 10+ rooms with seamless code editing, chat, white board collaboration and voice communication using Spring WebSockets
- Implemented Role-based system [Host/Editor/Viewer] with live joins, approvals, and Audit Logs in real time
- Integrated Judge0 with 6+ languages and Agora WebRTC with 300ms latency to synchronizing outputs in room
- Designed a personalized user dashboard displaying coding activity and account insights for user engagement.
- Integrated Razorpay payment gateway to enable Pro subscriptions with secure checkout.
- Containerized entire application using Docker, reducing environment related issues and improving deployment reliability.

Prompt 2 Paint | *Live* September 2025

- Built an AI-powered text-to-image generation SAAS platform using MERN STACK with 140+ active users generating 500+ AI images with optimized rendering and responsive UI design.
- Secured 10+ backend REST API endpoints with a multi-layer auth stack (JWT, Google OAuth 2.0, OTP verification, bcrypt hashing), achieving 0 reported security incidents post-launch
- Integrated Razorpay payment gateway with a credit-based monetisation model, processing 20+ secure transactions and implementing API rate controls to prevent resource abuse and ensure cost-effective operation.
- Built a personalised user dashboard covering favourites management, secure image storage, and user profile controls.

IslamiQ | *Live* February 2026

- Developed and shipped a scalable Quran companion app covering 114 Surahs, 6,000+ verses, and 500+ structured Ruk'u navigation points, enabling organised and seamless content access for users worldwide.
- Integrated English translation support for 6,000+ verses along with a dedicated reference section to improve clarity and understanding during recitation.
- Integrated Supabase for scalable data management, real-time content retrieval, and secure database operations.
- Designed a mobile-first, responsive UI using React and Tailwind CSS, delivering a consistent cross-device experience and reducing user drop-off on mobile sessions.

Certifications

- **Smart Coder** | *Smart Interviews* Verify Here
- **MongoDB** | *Certified Associate Developer* Verify Here

Achievements

- Solved 300+ problems on LeetCode and 450+ problems in CodeChef to strengthen problem-solving skills.
- Actively participated as Team Lead in 2 National-level Hackathons, conducted by IIT Madras and VR Siddhartha, collaborating in teams to design and develop web applications.
